

Senior Backend Engineer

About the role:

We are hiring a Senior Backend Engineer to help scale our data platform.

Requirements:

- 5+ years of professional experience in backend software engineering
- Strong proficiency in Python
- Hands-on experience with AWS
- Experience with SQL and relational databases (PostgreSQL preferred)
- Experience building REST APIs
- Must have experience with Docker and Kubernetes
- Solid understanding of microservices architecture

Preferred qualifications:

- Experience with Kafka or similar streaming systems
- Familiarity with Terraform
- Experience with CI/CD pipelines
- Exposure to machine learning pipelines
- Experience mentoring junior engineers

Responsibilities:

- Design and build scalable backend services
- Collaborate with data science team on ML pipeline integration
- Own on-call rotation and production reliability
